AUSHADHI VAULT

AI-Powered Smart Medicine Dispensing System

Project Overview

Aushadhi Vault is a proposed smart healthcare kiosk designed to improve access to prescribed medicines in rural and semi-urban communities. It combines AI-assisted prescription reading, teleconsultation, pharmacist verification, and automated medicine dispensing in one system.

How It Works

1. Prescription upload and AI/OCR validation **2.** Remote doctor consultation when needed
3. Pharmacist review and approval **4.** Secure automated dispensing of approved medicines

Basic Components

• Raspberry Pi 5 (8 GB) • ESP32-S3 microcontroller • Touchscreen • Camera/scanner • RFID access module
• Servo-based dispensing mechanism • Medicine storage compartments • Sensors and load cell • Software for prescription processing, inventory, and user interaction

Team

Payal Gosai | **Soumya Shukla** | **Shahrukh Khan**

Achievement

BIRAC–EYUVA — project associated with the EYUVA innovation programme.

Smart Medicine. Stronger Communities.
